

How to modify the Ultimate Dust Deputy[®] collection box to fit your Festool Mini or Midi.

The Ultimate Dust Deputy 9 gallon waste bin box lugs may need to be trimmed for the bin to properly fit Festool Mini and Midi dust extractors. Detailed instructions are shown below.

Using a sharp wood chisel, a hand grinder, or other suitable tool, carefully trim off the inside of the lug where indicated by the "X" in Fig. 1. First remove a small amount of material and then test the fit. Repeat as necessary until the clamp locks securely. Repeat the procedure on the opposite lug until the clamp on that side locks securely. Fig. 2 shows a completely trimmed lug.
